Leadway Wellness Portal

Product Concept Brief

Prepared by: Technical and Business Optimization Team **Date:** April 2026

Overview

The Leadway Wellness Portal is a purpose-built digital platform to manage gym benefit delivery end-to-end across three user types: enrollees, gym providers, and Leadway internal advocates. The portal eliminates manual claims processing, reduces fraud exposure, and gives members real-time visibility into their wellness benefits — all within a controlled, auditable environment.

The Problem We're Solving

Currently, gym benefit administration is largely manual — members don't have clear visibility into their entitlements, providers submit claims on paper or via email, and there is no real-time mechanism to validate whether a gym session actually happened before a claim is processed. This creates delays, disputes, and opportunities for fraud and abuse.

How It Works — The Core Flow

The portal operates on a one-time OTP (One-Time Password) model. When an eligible enrollee wants to use their gym benefit, they generate a unique OTP from their portal. They present this OTP at the gym. The provider validates it — and at the moment of validation, a claim is automatically created in the system. No paperwork. No batch submissions for session-level claims. One action closes the loop.

Portal 1 — Enrollee Access

Enrollees log in to a personal dashboard where they can:

- View their gym benefit balance and plan details
- Find covered gyms filtered by location and state, with a map view showing addresses, hours, and amenities
- Generate a session OTP to present at any covered gym (only available if sessions remain)
- Purchase additional gym sessions or upgrade to iFitness with a 20% Leadway discount, available monthly, quarterly, or annually — with a clear payment breakdown showing discount applied
- View full session history and past OTP usage
- Rate gyms after each visit (1–5 stars), feeding a quality monitoring database

> ***Important:*** *Only the principal and spouse are covered for gym benefits. Each person must log in with their own credentials and generate their own OTP. A principal cannot generate an OTP on behalf of their spouse, and vice versa.*

When a session is logged by a provider, the member immediately receives a WhatsApp message asking them to confirm the visit:

- **Yes** — session is confirmed, claim stands

- **No** — member is asked when they last visited, and a fraud alert is automatically triggered to the FWA unit with all details captured

Portal 2 — Provider Access

Gym providers access the portal using their existing Leadway provider credentials. In addition, a daily email OTP is required each day to unlock portal access — a second layer of security.

Once logged in, providers can:

- Check member eligibility — search by member ID or name to instantly confirm coverage and remaining sessions before attempting validation
- Validate a member OTP — enter the OTP presented by the member; the system confirms it as valid (unused), used, or expired
- Generate an OTP on behalf of a member — for cases where a member is present but unable to self-generate (e.g. no smartphone access); this is only possible if the member has sessions remaining and is automatically flagged as provider-generated in the audit trail
- View and manage claims — see pending claims (validated sessions not yet submitted), submitted claims, and paid claims with payment dates
- Download pay advice — per payment cycle, as a PDF for reconciliation
- Submit claims — providers can batch-submit weekly or monthly

If a member's WhatsApp confirmation returns a "No" response and a fraud flag is raised, the provider is notified immediately with a case reference number so they are aware an investigation is underway.

Portal 3 — Leadway Advocate (Internal) Access

This is the internal operational dashboard for Leadway staff. Advocates can:

- Search any member and see a full 360° view — plan details, gym benefit balance, complete OTP and session history, fraud flags, and top-up payment history
- Generate an OTP on behalf of a member — sent simultaneously to the member and provider via email, fully logged against the advocate's name and timestamp
- Send gym network emails — look up gyms accessible to a member in their area and trigger a pre-formatted email directly to the member from within the portal
- View the full gym provider network — with provider status (active, suspended, pending) and the ability to flag for status changes
- Monitor the FWA (Fraud, Waste & Abuse) dashboard — all fraud-triggered cases in one place, showing open cases, member responses, provider flags, and case status. The FWA team owns case closure; upon closure, claims are reversed automatically via API integration with the claims system
- Run utilization reports — gym usage broken down by provider, plan type, and month, supporting actuarial review and network management

Governance & Security Features

These controls apply uniformly across all three portals:

- Full audit trail on every action — OTP generation, validation, claim creation, advocate overrides — logged with user identity, timestamp, and IP
- Session timeout with automatic re-authentication after inactivity

- Notification centre across all portals for real-time activity alerts
- Communication log — every email sent to a member from the portal is stored with sender name, timestamp, and content for regulatory audit purposes
- Fraud flag → claim reversal pipeline — automated via API once FWA team closes a case, removing manual intervention from the reversal process

Why This Matters

This portal directly reduces leakage in the gym benefit line, gives members a better experience, reduces the administrative burden on providers and internal staff, and gives Leadway real-time data to manage its wellness network intelligently. It also creates a defensible audit trail for every transaction — which matters increasingly in a regulated environment.
